Product Engineer | Linear

Cover letter

I've spent much of my career building products that I then had to run and support. At Technomancy IT I built a TypeScript and PostgreSQL platform that connects support requests with the customer, service, and billing records someone needs to act. I also contributed to ProofMark across its browser UI, API, and webhooks. That's the kind of work I enjoy: talking through what a person needs, working across the stack, and sticking with it once the code is in production.

I taught myself by building things and working through the parts I didn't understand yet. Kerf, a TypeScript and TSX framework I built, came out of that habit. I wanted to see whether clearer compiler feedback could help me and coding agents spend less time figuring out what broke and more time building the feature. I built the compiler, routing, data layer, and UI toolkit, then published a starter and preview.

I'm interested in Linear because you take the feel of everyday workflows seriously, and you're working out where agents make those workflows better. I'd like to bring my experience building across product and infrastructure to a team that cares about both.
